ABSTRACT

INTRO

...

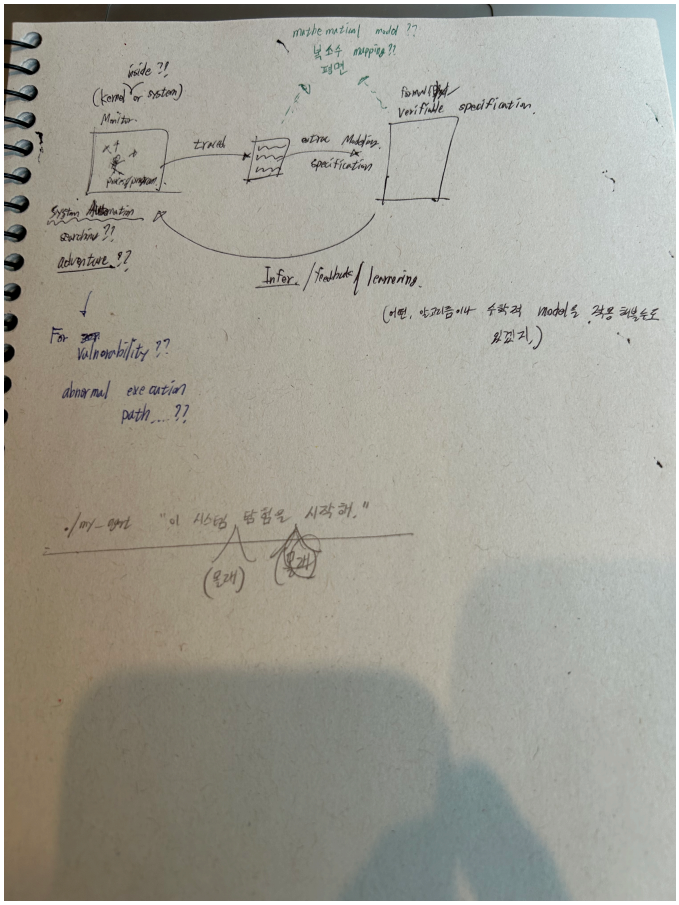

Figure 1: My rough note about the architecture

MOTIVATION

hacker bot, 몸속을 다니며 암세포를 지우는 micro bio bot(like 나루토의 벌레 능력자 처럼?), general of opaque layers.

DESIGN

0.1 Autonomous bot in the kernel

0.2 Visualization

All actions that the bot is doing are shown in real time as if it is the character in video games. **[Motivs of visualization: deepmind 테스트 하고 확인할 때/프로젝트 할 때 항상 시각화를 한걸 보면서 하더라, 캐논 변주곡 시각화로 보니 매우 인상 깊었고 새로운 통찰을 느꼈달까, rs-sdk 게임(agent의 동작의 게임화?).]**

0.3 Complex Plane

The trace of the bot maps to a complex plane.

0.4 Mathematical Formulation

The bot should be able to apply a kind of mathematical algorithms given so as to improve the ability.
